

# PROmpter

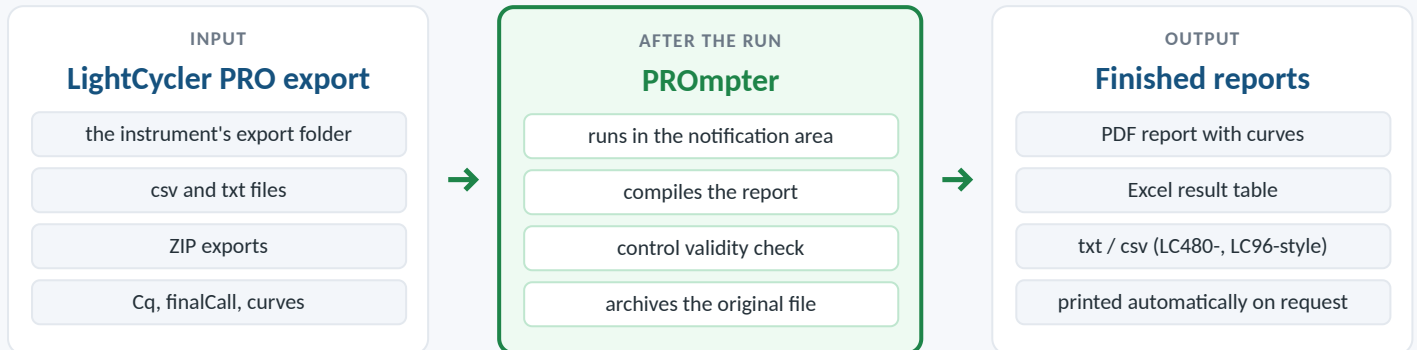

Custom result reports for the Roche LightCycler PRO

[welldone-prompter.github.io/PROmpter](https://welldone-prompter.github.io/PROmpter)

Free & offline

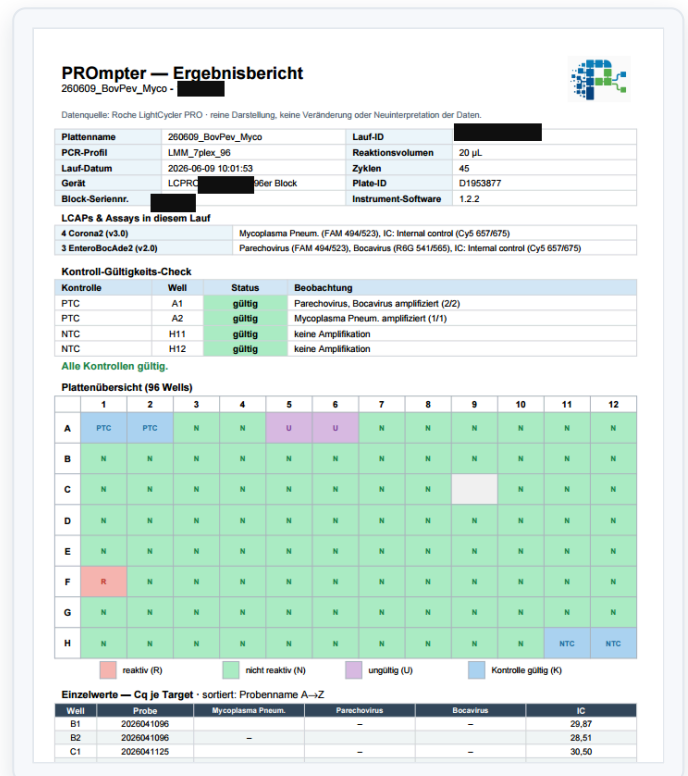

Windows · one single file · no installation  
no administrator rights · German & English

## WORKFLOW From the instrument export to the finished report

## What PROmpter does

- **Automatic processing** – watches the LightCycler PRO export folder and runs in the background
- **PDF report** – findings, control validity check, plate overview and amplification curves
- **Excel table** – every result of a run, ready for further processing
- **txt/csv export** – in LC480 or LC96 format, or freely customisable
- **Customisable** – composition, naming, sorting and presentation of the reports
- **No recalculation** – Cq, finalCall and curves come unchanged from the LightCycler PRO
- **Bilingual** – interface and manual in German and English

## EXAMPLE OUTPUT

The finished PDF report – header data, control validity check, plate overview and the Cq values per target. Created automatically for every run (serial numbers redacted in this example).

## Download PROmpter

[welldone-prompter.github.io/PROmpter](https://welldone-prompter.github.io/PROmpter)

Always the latest version – no installation, no administrator rights  
Detailed manual (German / English) as a PDF on the same page

## SISTER APP

### WellDone!

Does the plate setup **before** the run:  
pipetting scheme and LC PRO setup.

Sharing is explicitly encouraged – no sale
